

Product description

Human Growth hormone (hGH), is a peptide hormone which plays an important role in growth control. Its major role in stimulating body growth is to stimulate the liver and other tissues to secrete IGF-1. It stimulates both the differentiation and proliferation of myoblasts. It also stimulates amino acid uptake and protein synthesis in muscle and other tissues.

Labelled hGH is a recombinant protein, stable isotope labelled (SIL), designed for use as an internal standard for quantitative analysis of hGH by mass spectrometry (MS).

Synonyms: Somatotropin, Pituitary growth hormone

Product name Human GH SIL-protein

Catalog number GH596296

Uniprot ID P01241

Protein sequence

FPTIPLSRFLFDNAMLRAHRLHQLAFDITYQEFEEAYIPKEQKYSFLQNPQTSLCFSESIPTSPNREETQQKSNLELLRISLLLIQSWLEPVQFLRSVF
ANSLVYGASDSNVYDLLKDLLEGIQTLMGRLEDGSPRTGQIFKQYTSKFDNNSHNDDALLKNYGLLYCFRKMDMKVETFLRIVQCRSVEGSCGF

Product features and protocols

Key features

- 1 Purity >95%
as determined by SDS-PAGE
- 2 Labelling Uniform-¹⁵N
- 3 Isotopic incorporation >99%
as determined by LC-MS/MS
analysis of digested SIL-protein

Other features

Predicted MW	22.1 kDa
Expression System	<i>E. coli</i>
Purification Tag	No tag
Protein content	Determined by BCA assay with BSA as standard
Formulation	Lyophilized from 10 mM Sodium phosphate pH=8 ; 4% Mannitol buffer

Product preparation

For product preparation we recommend the following steps:

1. Briefly centrifuge the tube before opening
2. Reconstitute by adding the appropriate volume of ultrapure water for a final concentration of 200 µg/ml (e.g. 50 µl for 10 µg or 250 µl for 50 µg conditioning)
3. Vortex gently to insure complete dissolution
4. Wait 15 minutes at room temperature before proceeding further
5. Vortex gently again and centrifuge briefly

Product storage

The product is lyophilized and shipped at ambient temperature. **Store at -80 °C upon receipt.**

After reconstitution, the protein can be preserved at 4°C for a few weeks.

Avoid multiple freeze-thaw cycles

How to use our product

SIL proteins allow to overcome the process variability since they are added at the very beginning of a sample preparation. This has potential positive impact on your analyte quantification, especially if the analyte interacts with other species commonly present within the matrix (1).
